

a recess within the structural body shaped to secure an edge of the MEMS die; and
a flexible retaining arm adapted to retain the MEMS die within the recess.

16. (Canceled).

17. (Amended) The article recited in claim 15 wherein the flexible retaining arm includes a notch shaped for engagement with a tool for flexing the flexible retaining arm.

18. (As Filed) The article recited in claim 15 wherein each such station includes an access to an underside of the MEMS die.

19. (As Filed) The article recited in claim 18 wherein the access comprises a hole in the structural body.

20. (As Filed) The article recited in claim 18 wherein the access comprises a slot in the structural body.

21. (As Filed) The article recited in claim 15 wherein the structural body is circularly symmetric and the plurality of stations are configured symmetrically about a central axis of the structural body.

22. (As Filed) The article recited in claim 15 wherein the article is formed as a single continuous structure.

24. (Canceled).

25. (Amended) An article comprising:
a structural body having a plurality of means for securing a
microelectromechanical-systems (MEMS) die, wherein each such means for securing
includes a flexible means for retaining the MEMS die within a recess in the structural
body.

26. (Canceled).

27. (As Filed) The article recited in claim 25 wherein the structural body
is circularly symmetric and the plurality of means for securing are configured
symmetrically about a central axis of the structural body.

IN THE DRAWINGS:

Please amend the label of the fourth figure to read -- Fig. 2C --.

REMARKS

1. Drawings

The fourth drawing has been objected to because of an incorrect label.
Formal drawings are submitted concurrently herewith, with the corrected label.
